

BIRT-HOGG-DUBÉ SYNDROME INTERNATIONAL REGISTRY

About The Registry

The BHD Syndrome International Registry is a centralised database that collects information on the diagnosis, symptoms and management of Birt-Hogg-Dubé Syndrome.

We see a future where there are treatments or even a cure for BHD and believe BIRT is the first step to achieving that goal.

Aims of BIRT

- Development of clear diagnostic and management guidelines for BHD.
- Determine the prevalence of BHD.
- Assess the quality of life of those living with BHD.
- Find out if other cancers, aside from kidney cancer, are associated with BHD.
